

How to plant Starlet[®] - and Cityflor[®] - Roses

Planting period: January - Dezember

The expert for your roses.

- Our Starlet[®] - and Cityflor[®] - Roses are own root roses in small pots.
- The planting is possible all year round in frost-free periods.
- Avoid planting during midday heat.
- Just check if the soil is humid, otherwise water the bale.
- Dig a hole in a sunny place, wide and deep enough to accept the roots of the plant.
- Do not add fertilizer in the plant hole!
- The addition of horn shavings or well-cured garden compost to the garden soil before planting will help ensure a strong growth. Alternatively you may use special special rose substrate.
- Remove the pot.
- Put the rose plant into the prepared plant hole on ground level.
- Refill with soil.
- Afterwards fill plant hole with soil carefully and water well.
